#DIDYOUKNOW

Do cows need to shed?

In the subtropical climate of the Southeast, cows that fail to shed in a timely manner tend to show more signs of heat stress than their slick-coated herd mates. MAFES researchers found that on average, cows that shed their hair coats by the end of May weaned heavier calves than cows that take longer to shed. Hair coat shedding is a moderately heritable trait and should respond to selective breeding. Producers seeking to reduce shedding-related heat stress in their herds should evaluate their cows in late May and consider selling cows that shed little or not at all.

ATTENTION FUTURE ADS MAJORS!

Future student make sure to schedule a visit to come tour and see what Animal and Dairy Sciences has to offer.
